

## **Assignment 1 - Specific Container**

Using measurements that you take, create a 3D model of a beautiful container designed specifically to hold and protect your precious/interesting object. The container will be made of only printed plastic, including fasteners.

Document your process and research through measurements and calculations, sketches, and screen shots, etc. Physical models are encouraged. You will have to present evidence of your process along with the final object.

Your completed .stl file on your 2Gb SD card is due at the beginning of class on Thursday, January 26th.
